

Study Guide: entire document

****MANIPULATION STUDY GUIDE****

****SHORT-ANSWER QUIZ****

1. What is the purpose of the Document Object Model (DOM) in the context of AJAX?

2. What is the difference between JSON and XML as data formats?

3. What is the role of the XMLHttpRequest object in AJAX?

4. What is the benefit of using a Content Management System (CMS) for website development?

5. What is the key advantage of using RIAs (Rich Internet Applications) over traditional Web applications?

6. What is the purpose of JavaScript in the context of AJAX?

7. What is the difference between full-page reload and partial-page updating?

8. What is the role of XML or JSON in carrying data between the server and browser?

9. What is the benefit of using JSON over XML as a data format?

10. What is the key task of JavaScript in the context of AJAX?

****SUGGESTED ESSAY QUESTIONS****

1. Discuss the importance of the Document Object Model (DOM) in the context of AJAX and provide examples of its use.
2. Compare and contrast JSON and XML as data formats, highlighting their strengths and weaknesses.
3. Describe the role of the XMLHttpRequest object in AJAX and provide examples of its use.
4. Discuss the benefits and drawbacks of using a Content Management System (CMS) for website development.
5. Compare and contrast traditional Web applications with Rich Internet Applications (RIAs), highlighting their strengths and weaknesses.
6. Discuss the purpose and benefits of using JavaScript in the context of AJAX.
7. Describe the difference between full-page reload and partial-page updating, and provide examples of each.
8. Discuss the role of XML or JSON in carrying data between the server and browser.
9. Compare and contrast JSON and XML as data formats, highlighting their strengths and weaknesses.
10. Discuss the key tasks of JavaScript in the context of AJAX and provide examples of its use.

****GLOSSARY OF KEY TERMS****

1. ****AJAX****: Asynchronous JavaScript and XML, a technique for updating parts of a web page without requiring a full page reload.
2. ****DOM****: Document Object Model, a programming interface that represents the structure of an HTML or XML document as a tree of objects.
3. ****JSON****: JavaScript Object Notation, a lightweight data format based on JavaScript objects.
4. ****XMLHttpRequest****: A built-in JavaScript object that enables asynchronous communication between the client and server.
5. ****RIA****: Rich Internet Application, a type of web application that provides a rich user experience through the use of AJAX, JavaScript, and other technologies.
6. ****CMS****: Content Management System, a software application that enables users to create, edit, and manage content on a website without requiring technical expertise.

7. **XML**: Extensible Markup Language, a self-describing data format that uses custom tags to define data elements.
8. **JavaScript**: A programming language that enables client-side scripting and dynamic effects on web pages.
9. **Partial-page updating**: A technique for updating only the necessary parts of a web page without requiring a full page reload.
10. **Full-page reload**: A technique for reloading the entire web page, often used in traditional web applications.
